COMMUNICATIONS FEATURE FOR DISPATCH SYSTEMS

ABSTRACT OF THE DISCLOSURE

5   A communication system (100) includes a dispatch console (102) communicating with a plurality of subscriber units (104). Each subscriber unit (104) has a unit ID associated therewith. The dispatch console (102) automatically logs (206) the unit ID of each subscriber unit (104) that responds to an incident broadcast and forms a talkgroup (208) of the logged unit IDs for future incident broadcasts.

10   Thus, the user can change talkgroups and/ or channels without missing future incident broadcasts.
